

PRESS RELEASE

Boston Private Bank & Trust Company “Goes Live” on CapitalStream Straight Through Processing Solution

\$3.2 Billion Bank Achieves On-Budget and On-Time Implementation

SUNNYVALE, CA, AUGUST 17, 2010 – HCL Technologies, a leading global provider of software-led solutions, infrastructure management and BPO services, announced Boston Private Bank & Trust Company has successfully implemented the [CapitalStream™ “Straight Through Processing”](#) (STP) solution. CapitalStream was selected by the Boston Private Bank for its proven track record of success along and ability to automate and integrate into existing systems and functions throughout the lending process, providing faster and easier access to information. HCL’s well-formed and highly detailed implementation plan and its ability to lead the implementation was appealing, as Boston Private Bank had limited internal resources to handle a project of this size and scope.

CapitalStream is an integrated software platform enabling commercial banks and finance companies to implement Straight Through Processing across lending and leasing portfolios. CapitalStream has revolutionized lending by integrating and automating sales, origination, credit, decisioning, documentation, funding, booking and account monitoring. CapitalStream is a core component of HCL FinanceSolution™, a suite of software platforms, best practice methodologies and business transformation services specifically designed for lending and leasing including specialized configurations of enterprise solutions for CRM, content management, business intelligence and more.

Boston Private Bank implemented the CapitalStream “Best Practice Model,” which incorporates standard business processes required to support front office operations. The system is delivered with a core set of workflows, checklists, documents, reports, and flexible configuration capabilities, providing the ability to customize the platform to support Boston Private Bank’s unique requirements. The model and subsequent implementation plan have been developed utilizing HCL’s industry experience and direct input from existing customers.

“Configurability of the system by bank staff was a critical requirement for the selected platform, and where CapitalStream differentiated itself from the competition,” commented Neal O’Hurley, Sr. Vice President and Chief Credit Officer for Boston Private Bank. “With CapitalStream, we now have a single system to handle the underwriting, approval and monitoring of standard and complex loans.”

The project began last September with three core members of the implementation team – a project manager, a credit administrator and an executive sponsor. Resources were pulled from different areas of the bank as needed, with no more

than seven people working on the project at any given time. Other than the project manager who dedicated the majority of his time to the project, and the system admin (credit administration manager) who was fully dedicated on several occasions, it wasn't necessary for anyone else at the Bank to commit more than 50 percent of their time to the implementation.

"HCL provided a realistic implementation timetable and very clearly defined the benchmarks that needed to be achieved prior to moving to the next step," stated Tim Rowell, Project Manager for Boston Private Bank. "Communication both internally and with HCL was key to our success. We had a daily call with the involved parties so everyone was on the same page and any issues could be resolved on an ongoing basis."

"We are very pleased to have another successful on-time and on-budget midsize bank implementation," states Mike Pennell, Vice President, HCL CapitalStream Lending Group. "By implementing the CapitalStream "Best Practice" model, Boston Private Bank gets the best of both worlds – industry leading best practices that can adapt to their specific needs and easy accommodation for future growth and expansion."
