

HCLTech CloudSMART for AWS

CloudSMART for AWS with **SMART Ways** elevates cloud to a powerful business platform. We meet our clients where they are and implement SMART Ways to continuously modernize applications and data, implement value-add analytics and the connected cloud to future proof your business.

Introduction

Over the last decade, businesses realized the value of cloud as a platform for innovation. The massive shift to cloud brought speed and agility, but left a trail of abandoned applications, software and hardware choices – creating technical debt. HCLTech introduces CloudSMART for AWS, a new portfolio of offerings enabling continuous modernization, and all but eliminating technical debt.

Achieving continuous modernization is an ambition of all digital-ready and forward-thinking enterprises with innovation as a priority and reduction in technical debt as a mandate.

We meet clients where they are and with AWS, will showcase how SMART Ways enable continuous modernization of applications, data, platform and infrastructure to supercharge innovation. SMART Ways are Sustainable, Modern, Adaptable, Resilient and Transformative.

CloudSMART Modernization Experience

HCLTech CloudSMART industry experts lead a highly interactive and collaborative experience, which follows a structured program with defined deliverables. The program is planned over the course of 100 days with one objective: define a strategy to optimize cloud to serve the business today and into the future. HCLTech engages with the client's IT and business leaders to document the business needs and define their cloud strategy.

The engagement analyzes people, process, policies and platforms. The analysis is used to design and plan the cloud journey enabling clients to achieve business goals while adopting a culture of continuous cloud modernization. At HCLTech, we meet our clients where they are in their cloud journey and recommend SMART Ways to accelerate and innovate.

Key Features

- Develop business case with ROI for Cloud
- Determine operating models informed by industry trends and required business processes
- Identify organizational roles and plan for skills enablement
- Implement cloud native guard rails including process re-design
- Improve the business process value stream
- Identify other required assessments: platforms for apps, data as an example

Benefits

- Grow at scale: unlock the value of cloud and automate operations of critical systems
- Fund new projects by modernizing core infrastructure and applications
- Thrive against competitors as you discover insights hidden in your data by applying modern AI/ML techniques
- Take the lead in your markets by transforming traditional workloads to become modern platforms delivering more value through automation

Success Stories

- A large pharmaceutical company enables digital transformation to improve operations.
- Major automotive parts manufacturer implements analytics and connected cloud to improve margins.
- Competitive retailer transforms the customer experience by automating order fulfillment.
