

Maximizing the data advantage via AI/ML

HCLTech’s ADvantage Seiri helps organizations leverage maximum value from data through AI/ML-enabled pre-built data catalogs while simplifying overall data discovery from the silos that an organization has created over time. In other words, ADvantage Seiri enables a futuristic vision for an enterprise to have a next-generation data advantage.

The key components of ADvantage Seiri are:

<p>1</p> <p>Domain data model The domain data model has several entities and attributions, covering multiple business functions and processes.</p>	<p>2</p> <p>Business capability model ADvantage Seiri comes with a complete domain asset model consisting of business functions, processes, associated terms, CDEs, rules, stewards, workflows and more critical elements.</p>	<p>Supported Areas</p>  <p>Customer Experience</p>  <p>Regulatory Compliance</p>  <p>Product Management</p>  <p>Marketing</p>
<p>3</p> <p>Domain data catalog The domain data catalog comprises pre-built templates that can automate development of data catalogs and business glossaries using industry leading tools.</p>	<p>4</p> <p>Data quality and privacy To ensure data quality and privacy, the solution includes pre-built data classifications to automate compliance toward GDPR, CCPA and other regulations, as well as pre-built data quality rules for greater standardization.</p>	

How ADvantage Seiri impacts your data process positively

ADvantage Seiri provides built-in intelligence to fast-track your enterprise data management journey

Defining and developing metadata is the most tedious task in data management. But with its innate, robust capabilities, ADvantage Seiri impacts both primary and softer aspects such as conflict resolution, business buy-in and cultural change positively.

Data management platform

The solution provides an end-to-end management platform right from week 1 of implementation.

Data catalog

With built-in data and business definition templates specific to domain data models, the solution augments data catalog curation.

Metadata

The solution augments AI/ML capabilities of chosen tools through built-in metadata-accelerated data discovery and classification.

Business insights

The solution offers increased speed to insight through pre-developed business glossaries, processes, linkages and steward workflows.

Data quality and privacy

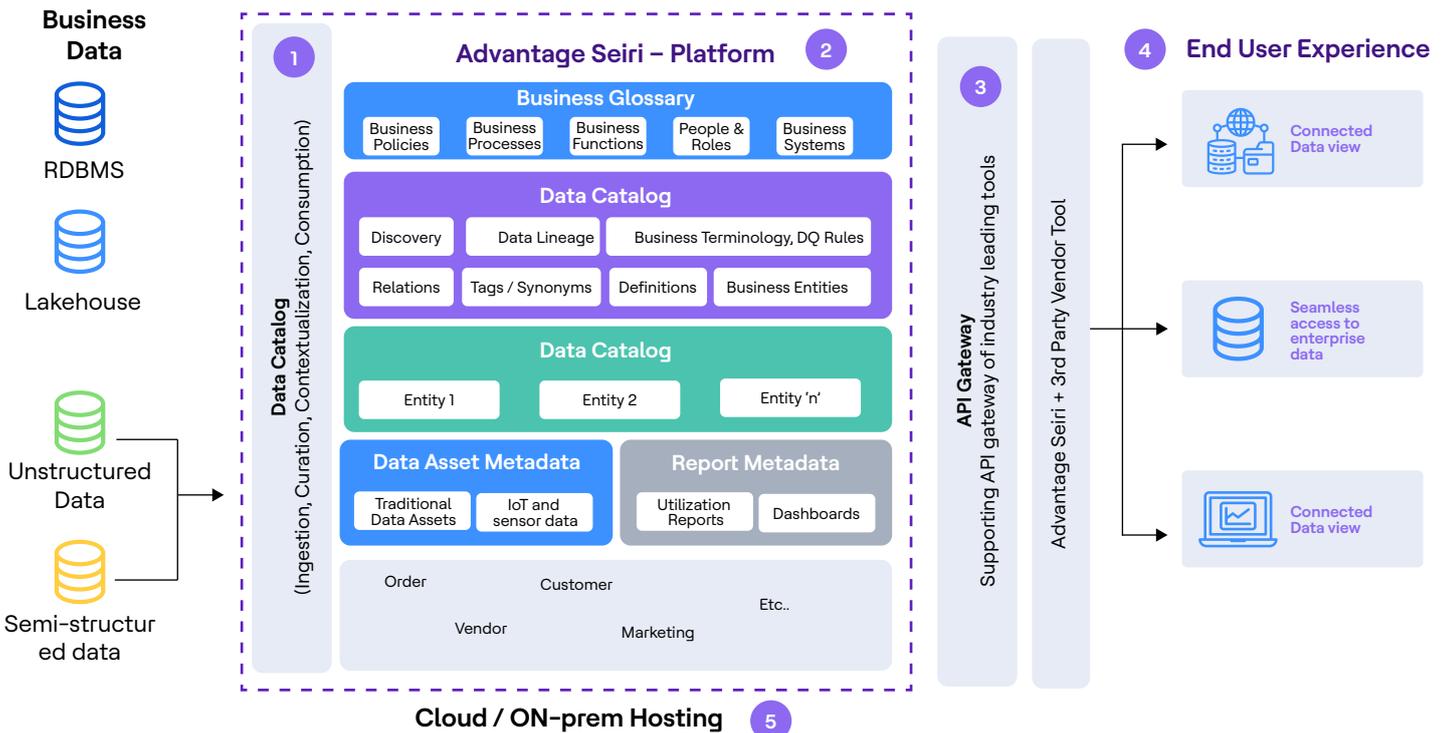

Built-in data quality rules in the solution help standardize data quickly, with built-in domain-specific classifications ensuring faster control of data privacy.

40-50% faster onboarding of a data management platform is possible using ADvantage Seiri

Architecture

With the help of its multilayered architecture, ADvantage Seiri is ideally placed to provide the highest data advantage to the enterprise.
