Provider Profiles 24

Report Author: Ashwin Gaidhani

AWS is among the most mature hyperscalers in the U.S.

Digital business transformation has led to dynamic changes and developments in technology strategies around cloud adoption. Currently, the main focus of hyperscalers is the enablement of the adoption of a cloud-first approach by enterprises, reinforcing security controls and infusing automation, serverless computing for performance and DevOps. A few key global trends in this context are enterprise sustainability and service resiliency through cloud solutions, such as the AWS Nitro System, a cluster of building blocks for faster innovation.

The U.S. is among the most mature and advanced markets for AWS, with the maximum density of partnerships,

resources and alliances for widening the cloud adoption perimeter. Multicloud and poly-cloud strategies are part of executive discussions to explore new possibilities for optimum enterprise benefits. Industry clouds and specialized use cases, focusing on performance and computing attributes, drive the evaluation of high-performance computing (HPC). Observers see an emphasis on efficient and secure data processing methods and the development of an interactive interface for data insights, using Amazon QuickSight. The U.S. market has a broad and varied range of service providers catering to the scale and magnitude of enterprises with niche cloud capabilities. Enterprises are looking for versatile service partners to help them adopt the best suitable technology, which is a step toward accelerating business transformation as part of their business strategies.

AWS hastens the creation of technology-agnostic cloud solutions.

This trend continues to be the focus of the U.S. market, as providers are co-innovating and designing new business-aligned solution packages. Furthermore, AWS has launched programs and initiatives to invite talent and expertise from various industries to develop advanced offerings; such initiatives include partnership programs and specific certification courses. AWS is also focusing on expanding its product portfolio, envisioning a vast array of client demands.

AWS Managed Services

AWS managed services are emerging as the most prominent, mature and fast-growing services in the U.S. The stiff competition in the AWS services market is compelling global service integrators (GSIs) to ramp up their competence in handling AWS managed services by speeding up the development of support software, integration and management

tools, and business applications. Their main focus is on devising CloudOps, DevOps, FinOps, MLOps, DataOps and automation solutions.

With the rising demand for AWS managed services, the need for a cloud-tech-stack-centric talent pool to acquire, improvise, adapt and repurpose related knowledge is increasing. The key focus areas in this context include advanced security offered in conjunction with Amazon Virtual Private Cloud (VPC); AWS Key Management Service, which gives users centralized control over the cryptographic keys; server-side encryption; data integrity authentication; networking traffic protection; and DevOps practices for implementation. The leading service providers in the market focus on infusing automation into every phase of cloud management, from monitoring to optimization.

AWS Consulting Services

Digital transformation has driven the demand for consulting services, with an inclination toward technology-, industry-, management- and implementation-related consulting guidance, all of which will enhance organizations' business outcomes. AWS consulting services are gaining traction and surpassing competitors' offerings by broadening the service scope. AWS and its partners are providing enterprises with a wide array of options by developing industry-specific solutions and service packages.

Consulting providers continue to build a comprehensible and modular approach to AWS consulting services to cater to a wide range of requirements. The rising adoption of cloud computing is encouraging service providers to diversify their AWS consulting service offerings to cater to the requirements of enterprises. Considering

this, consulting firms have developed their own global business services faculty to provide the consulting services needed as a single offering.

The AWS ecosystem is generally fast-paced and continues to grow, with more developments, upgrades and innovations. Enterprises are looking to adapt to the growing demands of the modern world quickly.

AWS SAP Workloads

SAP remains the most preferred ERP platform, and it is often closely integrated with AWS. Enterprises are focusing on making their workloads go cloud native. SAP is working on seamlessly transitioning business modules with AWS through transformation and modernization.

The latest market developments in the ERP space include the new strategic collaboration between SUSE and AWS,

offering a migration acceleration platform for SAP clients looking to move to the cloud. The strategic partnership between SUSE and AWS outlines deliverables and investment areas to help smooth-migrate clients to AWS. The deliverables include joint go-to-market activities across sales, marketing, channel enablement and training.

In addition, Amazon AppFlow, a fully managed integration service that helps clients securely transmit data between AWS services and SaaS applications, now supports data transfers from SAP applications to AWS services using SAP Operational Data Provisioning (ODP) framework. With this launch, AppFlow clients can use the AppFlow SAP OData connector to perform complete and incremental data transfers, including change data capture, using SAP Operational Delta Queue. Use cases combining AWS data lakes, big data

tech stacks and cloud storage such as S3, combined with the predictive data analytics capabilities from S/4 HANA, are becoming mainstream in all strategic enterprises and transformation programs.

AWS Data Analytics and Machine Learning

AWS provides a wide array of analytic services that fit data visualization needs, enabling organizations of all sizes and industries to reinvent their business. Data movement, storage, data lakes, big data analytics, log analytics, streaming analytics and business intelligence constitute vital data management activities. AWS provides purpose-built services with the best performance, scalability and reasonable commercial models for all enterprise sizes.

AWS-powered data lakes are supported by the unmatched ability of Amazon S3 to manage the scale, agility and flexibility

required to integrate different data and analytics approaches. Service providers are building prowess in the AWS analytics space to help enterprises gain fast data insights using optimized and appropriate tools such as interactive analytics, big data processing, data warehousing and interactive analytics. The unique perspective of new dimensions of data helps businesses make decisions and explore new possibilities. These embedded components optimize datasets, linguistic AI and visualization of systems. With the advent of new developments and innovation, many businesses realize the importance of incorporating AI and machine learning into applications to analyze and learn from the vast and accessible datasets.

AWS Internet of Things (IoT) Services

IoT continues to gain popularity across industries due to its ability to access and capture data that was impossible

to acquire earlier in the physical world. AWS IoT offers services and solutions to connect and manage billions of devices across all physical assets. It has become effective in collecting, storing and analyzing IoT data for industrial, commercial and automotive workloads. AWS IoT solutions cover many technological components, including sensors, devices, networks, security and management systems.

The main characteristic of IoT is that it can be integrated easily with other AWS services, making processes more efficient. AWS IoT services include AWS IoT click, which enables simple devices to trigger AWS Lambda functions that can execute an action, thus allowing the user to perform activities such as notifying technical support, tracking assets, and replenishing goods and services, among others.

AWS Migration Services

The trend of digitalization has prompted numerous businesses to adapt quickly to the changing times. However, many organizations with complex systems struggle to react swiftly to such changes. This has further pushed to rationalizing, transitioning and modernizing existing software and infrastructure, pointing toward cloud migration. Transitioning data services and systems is a critical and complex task that requires careful regulation and calibration of activities. Considering this space's enormity and potential, the need for innovation and the modernization of technologies is imperative. AWS migration services allow the quick realization of the benefits of migrating applications to the cloud without changes and with minimal downtime or glitches.

AWS is enterprises' most preferred choice for industry cloud services.

This study focuses on what ISG perceives as most critical in 2022 for **AWS Ecosystem Partners**.

Simplified Illustration Source: ISG 2022

Definition

In 2022, AWS has been introducing major innovations in services related to the cloud, data analytics and machine learning alongside the general mission that is all about supporting clients within their sustainability transformations, digital sovereignty and innovation power. Public cloud usage tends to outstrip traditional infrastructures and therefore known techniques for operations. Therefore this mission depends on sophisticated CloudOps that cover cloud security and governance, resource and cost optimization, event-based or intelligent provisioning of resources, and service availability across delivery models (including the edge), which implies the need for maximum interoperability of services.

Hence, AWS has launched several engagement models and options for its strategic service provider partners to train and upskill their cloud workforces in leveraging the latest platform innovations through its AWS Partner Network (APN). The partnerships have matured in terms of AWS cloud opportunities including migration, implementation and integration, data and AI, IoT services, SAP services and managed services.

Some of the main AWS innovations that have contributed to the growth and market for AWS, APN and its end-user enterprise clients, include new high-performance EC2 C7g instances with AWS Graviton3 processors, new locations for AWS DataSync and AppSync simplified interfaces for Pub/Sub APIs.

For cloud managed services and operations governance, service augmentations such as FedRAMP-compliant Kinesis Data Analytics bring in industry-specific compliance requirements around public cloud adoption. On the cloud security and data privacy protection front, Amazon Comprehend can detect and redact several new personally identifiable information types across the U.S., the U.K., India and Canada.

AWS has also made major contributions in the data, AI and machine learning spaces through additional offerings and enhancements beyond governance, data privacy and protection issues.

According to the first-quarter 2022 ISG Index™, the global managed services market grew by 13 percent to reach \$8.6 billion, while the as-a-service market grew by 43 percent to reach \$15.6 billion.

AWS partners play a critical role for customers and prospective customers of AWS services to keep up with this pace of innovation and make a meaningful entry into AWS services in the first place. This study examines this important market of AWS partners, and the services they provide, to provide transparency on six selected topics for five countries.

This ISG Provider Lens™ study offers IT decision makers the following:

- Transparency on the strengths and weaknesses of relevant providers
- Differentiated positioning of providers based on important market segments
- Perspective on markets in Australia, Brazil, France, Germany and the U.S.

This study serves as an important decision-making basis for provider positioning, key relationships and go-to-market considerations. ISG advisors and enterprise clients also use information from these reports to evaluate their current vendor relationships and potential new engagements.

Scope of the Report

In this ISG Provider Lens™ quadrant study, ISG includes the following six quadrants: AWS Consulting Services, AWS Data Analytics and Machine Learning, AWS Internet of Things (IoT) Services, AWS SAP Workloads, AWS Migration Services and AWS Managed Services.

Provider Classifications

The provider position reflects the suitability of IT providers for a defined market segment (quadrant). Without further additions, the position always applies to all company sizes classes and industries. In case the IT service requirements from enterprise customers differ and the spectrum of IT providers operating in the local market is sufficiently wide, a further differentiation of the IT providers by performance is made according to the target group for products and services. In doing so, ISG either considers the industry requirements or the number of employees, as well as the corporate structures of customers and positions IT providers according to their focus area. As a result, ISG differentiates them, if necessary, into two client target groups that are defined as follows:

Midmarket: Companies with 100 to 4,999 employees or revenues between \$20 million and \$999 million with central headquarters in the respective country, usually privately owned.

Large Accounts: Multinational companies with more than 5,000 employees or revenue above \$1 billion, with activities worldwide and globally distributed decision-making structures.

The ISG Provider Lens™ quadrants are created using an evaluation matrix containing four segments (Leader, Product Challenger, Market Challenger and Contender), and the providers are positioned accordingly. Each ISG Provider Lens quadrant may include service providers that ISG believes have strong potential to move into the Leader quadrant. This type of provider can be classified as a Rising Star.

Number of providers in each quadrant: ISG rates and positions the most relevant providers according to the scope of the report for each quadrant and limits the maximum of providers per quadrant to 25 (exceptions are possible).

Provider Classifications: Quadrant Key

Product Challengers offer a product and service portfolio that reflect excellent service and technology stacks. These providers and vendors deliver an unmatched broad and deep range of capabilities. They show evidence of investing to enhance their market presence and competitive strengths.

Contenders offer services and products meeting the evaluation criteria that qualifies them to be included in the IPL quadrant. These promising service providers or vendors show evidence of rapidly investing in products/services and follow a sensible market approach with a goal of becoming a Product or Market Challenger within 12 to 18 months.

Leaders have a comprehensive product and service offering, a strong market presence and established competitive position. The product portfolios and competitive strategies of Leaders are strongly positioned to win business in the markets covered by the study. The Leaders also represent innovative strength and competitive stability.

Market Challengers have a strong presence in the market and offer a significant edge over other vendors and providers based on competitive strength. Often, Market Challengers are the established and well-known vendors in the regions or vertical markets covered in the study.

★ **Rising Stars** have promising portfolios or the market experience to become a Leader, including the required roadmap and adequate focus on key market trends and customer requirements. Rising Stars also have excellent management and understanding of the local market in the studied region. These vendors and service providers give evidence of significant progress toward their goals in the last 12 months. ISG expects Rising Stars to reach the Leader quadrant within the next 12 to 24 months if they continue their delivery of above-average market impact and strength of innovation.

Not in means the service provider or vendor was not included in this quadrant. Among the possible reasons for this designation: ISG could not obtain enough information to position the company; the company does not provide the relevant service or solution as defined for each quadrant of a study; or the company did not meet the eligibility criteria for the study quadrant. Omission from the quadrant does not imply that the service provider or vendor does not offer or plan to offer this service or solution.

AWS Consulting Services

Who Should Read This

This report is relevant to enterprises across industries in the U.S. for evaluating the ability of providers offering consulting services for the transformation of client's cloud ecosystem to meet unique enterprise and customer demands.

In this quadrant report, ISG highlights the current market positioning of AWS consulting providers in the U.S. and how they address the key challenges in the country. Our assessment is based on the depth and breadth of providers' service offerings and market presence.

Enterprises in the U.S. are adapting to the changes rising from their cloud journeys and migration to the cloud ecosystem. However, they face several challenges such as inadequate evaluation of capabilities, issues in change management, shortage of talented professionals and uncertainties about

integration with legacy infrastructure. With AWS consulting services, enterprises will have access to expertise on workload assessment, transformational strategy, advisory, re-architecture of legacy applications and integration of automation capabilities.

With enterprises focusing on the adoption of multicloud platforms and service integration, leveraging and integrating AWS plus X is gaining interest. Service providers should also have FinOps expertise along with AWS optimization capabilities as these are gaining strong traction among enterprises. Enterprises are hesitant to being advised by providers on the selection of hyperscalers and are particular before engaging in any partnerships. They tend to partner with a provider only when a successful pilot is executed before any wider portfolio partnership.

IT Leaders should read this report to better understand the relative strengths and weaknesses of consulting service providers, which would help them lead the digital transformation drive in their enterprises.

Sourcing, procurement, and vendor management professionals should read this report to develop a better understanding of the current landscape of consulting service providers in the U.S.

Software development and technology leaders should read this report to understand the positioning of consulting service providers and how the providers' offerings can impact an enterprise's ongoing transformation initiatives, while identifying the benefits of moving to the cloud.

This quadrant assesses how service providers **guide and consult enterprise clients** to adopt the AWS cloud for their business, technology and functional processes. This section covers the **mapping the right transition model** and AWS services.

Ashwin Gaidhani

Definition

Consulting partners form the single-largest group in the AWS Partner Network. Providers in this quadrant offer training, analysis, insight and guidance to address a wide range of business and IT needs, including cloud strategy, business case development and support, and client needs for (and delivery of) governance, risk and compliance support. They must not only offer critical technologies, architecture, security and industry-specific solutions, but also demonstrate business value to be delivered through consulting services

Eligibility Criteria

1. **Availability, experience and certification** of the staff supporting and delivering relevant offerings
2. Scope of **AWS competency and service delivery offerings** and certifications
3. **AWS-focused consulting roadmap** and innovations (current and planned)
4. Demonstrate client **value through business outcomes** or other measurable improvement
5. Scope and availability of **enabling programs for customer success** (for example, planning workshops and training)
6. Scope of **security tools, technology and services** utilized
7. Number and reputation of references **for services and solutions on AWS**
8. Suitability, maturity and **adaptability of pricing model**

Observations

Enterprises are rapidly adopting technological advances by developing expertise in their specific industry verticals. Business transformation advisory services typically comprise virtualization and business optimization objectives. AWS consulting can be the foundation of business engagements, as it carefully assesses the present landscape and suggests the right approach. Choosing the suitable process and mapping the right cloud capabilities are crucial for cloud transformation initiatives.

Providers are designing services, encompassing sustainability, application modernization and data monetization. They are also strengthening their AWS portfolio to survive the competition in the market. The prominent feature of AWS consulting is Perspective Guidance, which

provides time-tested strategies, guidelines and patterns to accelerate cloud migration. Some trends in consulting include:

- The AWS Ambassador program, curated by AWS, certifies technology experts from the global community of AWS partners. These AWS ambassadors educate enterprise clients on AWS services and their benefits, as well as recommend the best-suited strategy.
- Consulting guidance on multicloud solutions, to build resiliency, is in high demand now. However, poly-cloud solutions are still in the evaluation and discussion phase, as the use cases are distinctive and industry reliant, requiring a high degree of technological maturity. However, the poly-cloud approach is gaining traction in niche industry solutions.

- Service providers are significantly investing in digital innovation, as they are keen on understanding the use of AWS services to accelerate the time-to-market for new and innovative products. Furthermore, AWS platform engineering skills and capabilities are a consistent requirement for enterprise clients to facilitate self-service, which can enhance developers' productivity.

From the 56 companies assessed for this study, 30 have qualified for this quadrant, with 13 being Leaders and two Rising Stars.

accenture

Accenture, with its proven track record of delivering advanced AWS consulting solutions, combines its domain knowledge and technological capabilities to serve clients in the U.S. market, covering all major industries.

Capgemini

Capgemini's collaboration with AWS enables its clients to keep track of employee movements within the premises, predict employee sentiments, and help their facility management teams monitor and utilize resources efficiently. Furthermore, the AWS Solution Provider Program enables the company to manage, service, support, and bill AWS accounts for enterprise clients.

cognizant

Cognizant focuses on finding the right balance of public, private and hybrid clouds for clients based on their specific requirements. One of the key strengths of the company is its cloud consulting services.

AWS Consulting Services

Deloitte

Deloitte integrates AWS services such as Amazon CloudWatch and AWS Systems Manager with its OpenCloud platform to help clients achieve optimal strategic outcomes from integrated technology and service value chains, with a focus on governance, risk management and sustainability.

HCLTech

HCLTech's AWS business unit leverages an innovative cloud inception framework. This helps establish, adopt and manage complex and hybrid IT environments, combining people, advisory services, processes and technologies, making HCLTech AWS's Premier consulting partner.

Hexaware, with Amaze, Mobiquity and Tensai, makes AWS consulting and client journey mapping a holistic, multidimensional approach across various functions.

Infosys combines intellectual property with advanced tools for realizing the potential of cloud deployment and migration. This helps clients discover and integrate enterprise software, services and processes to make them cloud ready and cloud enabled for high-performance digital businesses.

LTI's consulting and advisory services are strategically segregated and positioned by design. It explicitly focuses on building state-of-the-art accelerators and developing industry-specific AWS solutions and service offerings.

PwC

PwC and AWS combine deep industry knowledge with a vast network of cloud engineering resources to guide clients in building agile, purpose-built solutions powered by the AWS cloud, with a focus on cloud consulting.

Rackspace Technology has significant expertise in cloud migration and adoption, application modernization and cloud security. Its services portfolio covers assessment, evaluation and recommendation, with a focus on ideation and innovation.

TCS seeks to expand its AWS capabilities through research and co-innovation on the TCS Pace Port™ platform. It leverages its Machine First Delivery Model and automation assets for large organizations in multiple domains, focusing on delivering AWS consulting services.

AWS Consulting Services

Tech Mahindra has a wide range of consulting services, from assessing client landscapes and planning the migration of applicable and appropriate workloads to strategizing modernization initiatives.

Wipro AWS consulting services range from consulting to implementation and operation, enabling clients to achieve targeted business outcomes.

Rising Star **Mindtree's** AWS consulting services cover microservices, technology applications, cloud consulting and security. With its knowledge in sustainability-focused practices, the company drives modernization initiatives for enterprise clients.

Persistent Systems

Rising Star **Persistent Systems** and AWS combine domain knowledge and technology expertise with a business-first approach to accelerate cloud transformation tailored to each client's needs.

HCLTech

“HCLTech’s CloudSMART enables clients to have a long-term, predictable cloud modernization journey.”

Ashwin Gaidhani

Overview

HCLTech is headquartered in Noida, India, and operates in 52 countries. It has more than 208,900 employees across 215 global offices. In FY22, the company generated \$11.5 billion (+12.8 percent YoY) in revenue, with IT and business services as its largest segment. HCLTech is a premier and managed services partner for six AWS competencies.

Strengths

Differentiated, industry-leading approach of AWS cloud continuum:

HCLTech and AWS have been working on a unique partnership program to ensure success in clients’ cloud journeys in a continuum. This is an industry best practice from HCLTech’s AWS consulting services, given that strategic cloud journeys of any enterprise are to be planned and executed in a long-term, sustained approach, rather than planning for point projects on the cloud.

CloudSMART: continuous cloud modernization solution stacks and services: In line with this

evolving partnership theme, HCLTech has augmented AWS consulting services and industry-focused strategic programs offering continuous cloud modernization solutions in CloudSMART, for AWS. In these programs, HCLTech and AWS experts work alongside customer teams to create a long-term strategic cloud implementation plan and associated milestones.

Accelerated pace of cloud-based digital transformation: The cloud continuum approach ensures that clients’ overall ongoing digital transformation programs are driven at a consistent, yet accelerated pace and scale.

Caution

The HCLTech and AWS partnership has flourished over the years. Currently, with strategic joint initiatives like CloudSMART, HCLTech must elevate its cloud strategies to top-level enterprise executives. This will require drastically different and long-term, industry-first thought leadership from HCLTech in mature markets, such as the U.S., on its cloud continuum approach and associated solutions and benefits.

Appendix

The ISG Provider Lens 2022 – AWS Ecosystem Partners analyses the relevant software vendors/service providers in the U.S. market, based on a multi-phased research and analysis process, and positions these providers based on the ISG Research methodology

Information Services Group Inc. is solely responsible for the content of this report. Unless otherwise cited, all content, including illustrations, research, conclusions, assertions and positions contained in this report were developed by, and are the sole property of Information Services Group Inc.

The research and analysis presented in this report includes research from the ISG Provider Lens™ program, ongoing ISG Research programs, interviews with ISG advisors, briefings with services providers and analysis of publicly available market information from multiple sources. The data collected for this report represents information that ISG believes to be current as of November 2022, for providers who actively participated as well as for providers who did not. ISG recognizes that many mergers and acquisitions have taken place since that time, but those changes are not reflected in this report.

All revenue references are in U.S. dollars (\$US) unless noted.

The study was divided into the following steps:

1. Definition of AWS Ecosystem Partners marke
2. Use of questionnaire-based surveys of service providers/ vendor across all trend topics
3. Interactive discussions with service providers/vendors on capabilities & use cases
4. Leverage ISG's internal databases & advisor knowledge & experience (wherever applicable)
5. Use of Star of Excellence CX-Data
6. Detailed analysis & evaluation of services & service documentation based on the facts & figures received from providers & other sources.
7. Use of the following key evaluation criteria:
 - * Strategy & vision
 - * Tech Innovation
 - * Brand awareness and presence in the market
 - * Sales and partner landscape
 - * Breadth and depth of portfolio of services offered
 - * CX and Recommendation

Author & Editor Biographies

Lead Author

Ashwin Gaidhani
Research Partner

Ashwin Gaidhani has a comprehensive view of IT shared-managed services portfolio and digital business transformation initiatives with approximately two decades of experience. As an ISG Research Partner and subject matter expert in the field of enterprise services and digital technologies, he is presently contributing as a Lead Author with the ISG Provider Lens™ team. Ashwin comes to this work with business and technology experience revolving around service management, digital governance, emerging

capabilities (artificial intelligence and intelligent automation), work design methodologies, and implementation frameworks. He is a highly qualified and experienced ITIL Expert with lifecycle experience in operations, delivery, consulting, and advisory for large corporations, including enduser, ITSP, and Technology product companies. He effectively partners with C-Level executives and tactical leaders to institutionalize digital business transformation and strategic initiatives.

Lead Author

Dr. Tapati Bandopadhyay
Lead Analyst

Dr. Tapati Bandopadhyay has been an inventor, builder, practitioner and researcher in AI, intelligent automation and related domains, for 25+ years. She has been a global practice leader and executive-level advisor & consultant, in AI-automation-cloud and services management, covering MLOps, AIOps, CloudOps, DataOps, ModelOps & DevOps metrics-driven practices and data and AI story-building and storytelling practices and tools. As an ISG Lead Analyst on AWS and in AI-ML,

consulting & managed services, she is responsible for defining and leading the ISG Provider Lens branded research projects, for the US market. Prior to working at ISG as a Lead Analyst and Research Partner, Dr. Tapati served in senior positions as Vice President, General Manager and Senior Director Research, at HFS, Wipro, Gartner, respectively.

Author & Editor Biographies

Enterprise Context and Global Overview Analyst

Srinivasan PN
Research Specialist

Srinivasan PN is a senior research analyst at ISG and is responsible for supporting and co-authoring ISG Provider Lens™ studies on AWS & Google Ecosystem, Digital Engineering, Manufacturing and Mainframe. His area of expertise lies in the space of engineering services and digital transformation. Srinivasan comes with 8 years of experience in the technology research industry and in his prior role, he carried out research delivery for both primary and secondary research capabilities. Srinivasan also authors

enterprise context reports and global summary reports for each of his expertise areas. Along with this, he supports the advisors with his research skills and writes papers about latest market developments in the industry.

IPL Product Owner

Jan Erik Aase
Partner and Global Head – ISG Provider Lens™

Mr. Aase brings extensive experience in the implementation and research of service integration and management of both IT and business processes. With over 35 years of experience, he is highly skilled at analyzing vendor governance trends and methodologies, identifying inefficiencies in current processes, and advising the industry. Jan Erik has experience on all four sides of the sourcing and vendor governance lifecycle - as a client, an industry analyst, a service provider and an advisor.

Now as a partner and global head of ISG Provider Lens™, he is very well positioned to assess and report on the state of the industry and make recommendations for both enterprises and service provider clients.

*ISG Provider Lens™

The ISG Provider Lens™ Quadrant research series is the only service provider evaluation of its kind to combine empirical, data-driven research and market analysis with the real-world experience and observations of ISG's global advisory team. Enterprises will find a wealth of detailed data and market analysis to help guide their selection of appropriate sourcing partners, while ISG advisors use the reports to validate their own market knowledge and make recommendations to ISG's enterprise clients. The research currently covers providers offering their services across multiple geographies globally.

For more information about ISG Provider Lens™ research, please visit this [webpage](#).

*ISG Research™

ISG Research™ provides subscription research, advisory consulting and executive event services focused on market trends and disruptive technologies driving change in business computing. ISG Research delivers guidance that helps businesses accelerate growth and create more value.

ISG offers research specifically about providers to state and local governments (including counties, cities) as well as higher education institutions. Visit: [Public Sector](#).
