

Data Marketplace capabilities

Reimagining Data-as-a-Service with
HCL Technologies' data marketplace solution

Typical **challenges faced** by large enterprises in the current growing market

- **Slow turnaround of data and analytics:** Adhoc requests that take days, even weeks or months because of low collaboration and reuse amongst business users and data scientists.
- **Lack of self-serviceability** and transparency in processing data and analytics requests leads to shadow IT teams.
- **Inability to gauge the usage** and the Rol of the data and analytics assets
- **Redundant data and analytics assets** across multiple systems
- **Poor performance** of the system because of redundancies and data proliferation

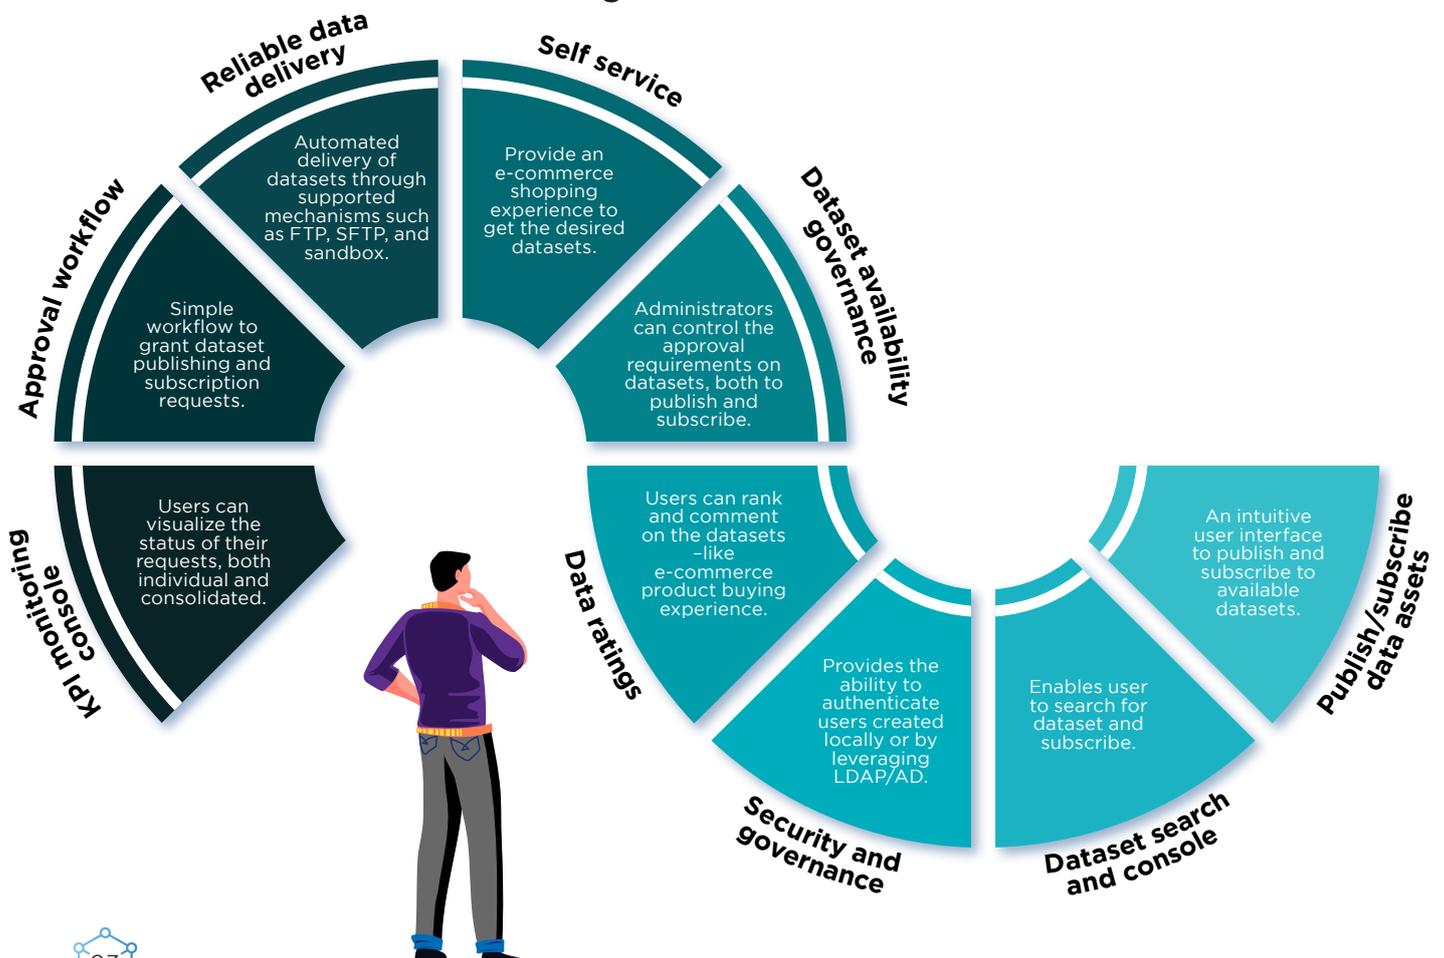

With heterogeneous data landscapes, organizations struggle to provide a holistic view of multiple Data and Analytics systems and their usage. This, coupled with a lack of self-serviceability and transparency in processing Data and Analytics requests leads to shadow IT teams. Additionally, a slow turnaround of teams to meet ad hoc data requests from business or data scientists and redundant Data and Analytics assets across multiple systems makes it difficult to achieve ROI for the Data and Analytics assets.

The marketplace enables enterprises to integrate data from different sources and make it available for consumption by different users in a secure manner. Any enterprise requiring large amounts of data can subscribe to the data marketplace, and access required datasets.

Today, business leaders recognize that a data-driven enterprise is more agile and adaptable than one that relies solely on traditional ways of doing business. Moreover, a data marketplace promises to easily connect consumers and suppliers of data—to make it easier to find, use, and monetize trusted data in a frictionless way.

Data marketplaces can help enterprises boost revenue by monetizing their data assets, reduce costs by eliminating redundant systems, increase employee productivity through self-service access to analytics, and improve their decision-making with trusted and timely insights. They also can be an effective tool for partnering with customers or suppliers and building new ecosystems to drive innovation.

HCLTech's **Data Marketplace:** Key features

Introducing continuous collaboration with **Data Marketplace**

The key feature of this platform is the ability to provide real-time collaboration between multiple users in different locations without any delay or lag due to distance. The platform allows researchers or analysts to access their data remotely to collaborate with others.

Integrated data layer (IDL) provides unified, integrated access on top of existing on-premise data systems, cloud data platforms, and any other additional data sources. IDL is a powerful, flexible, and extensible solution that can match all kinds of requirements that arise when integrating different data sources.

This aims to result in faster outcomes by leveraging the following key components-

Building an integrated view of diverse data sources

Multiple views of the same data for multiple user needs

Easier to make changes without modifying ETL

Shorter time to market for various data consumption patterns

Unified data governance and security

De-couple data layer and consumption layer

Access to cleansed data

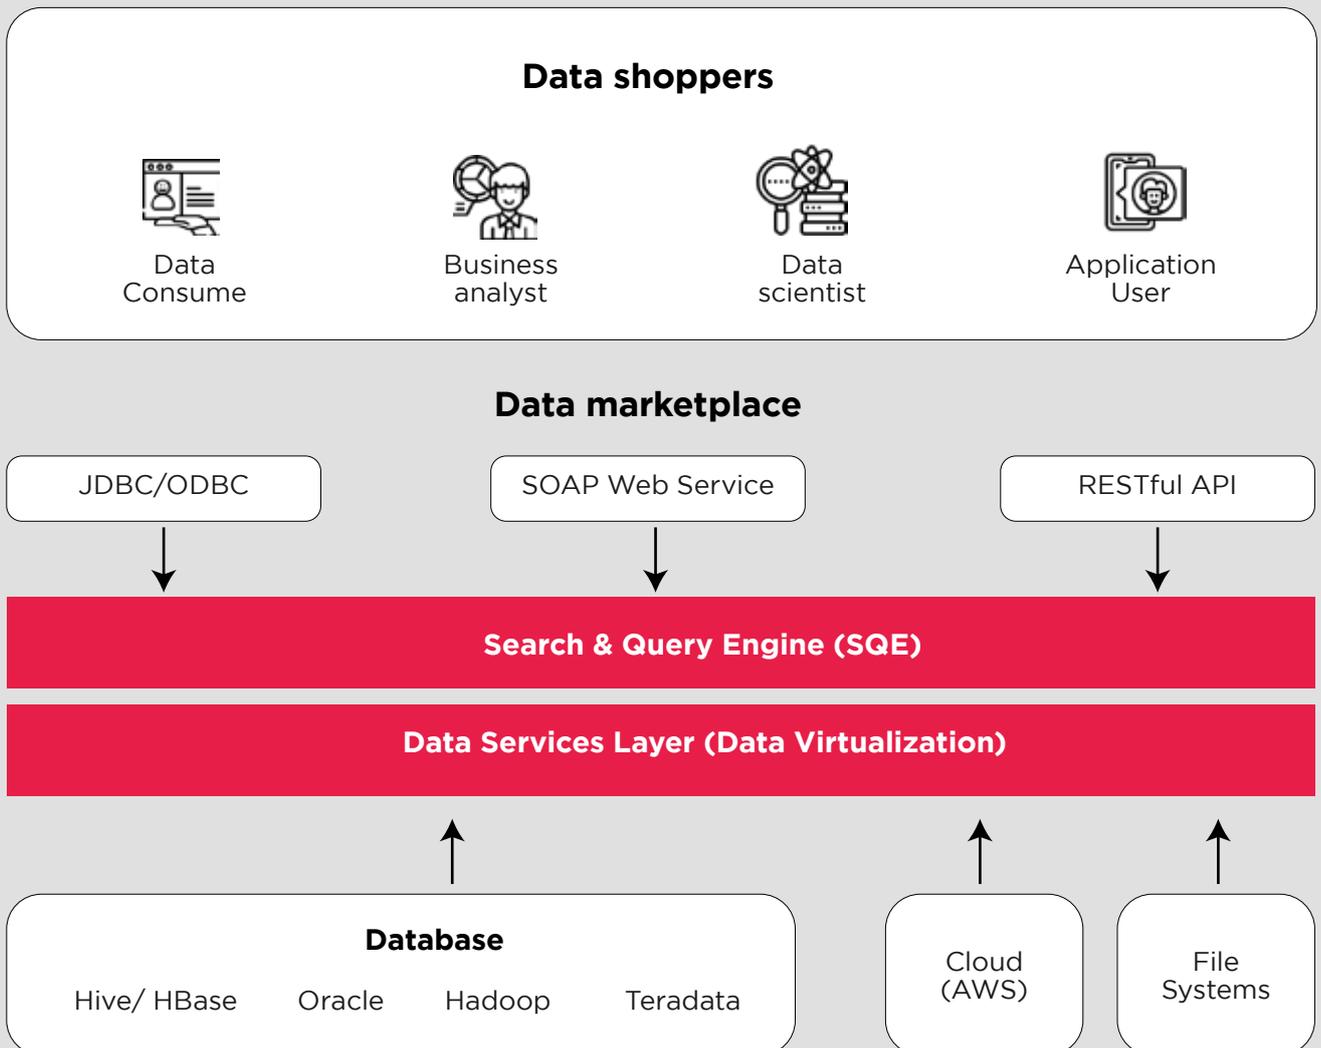

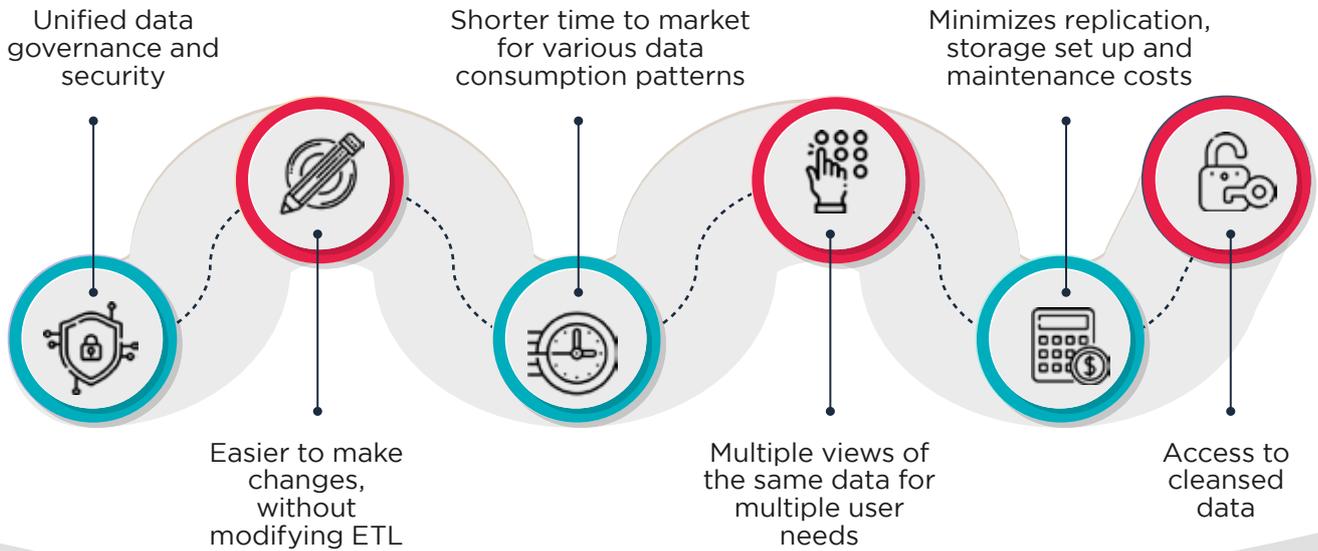

Minimizes replication, storage setup, and maintenance costs

Enabling multiple personas through prebuilt algorithms to infuse predictability and transparency in services

Data Marketplace – Functional View (Components)

“Integrated Data Layer” provides a unified integrated access on top of existing on-prem data systems, cloud data platforms and/ or any other additional data sources - without physically moving the data and by combining related data into views and publishing the data for consumption through Data Marketplace.

Building an Integrated View of diverse data sources De-couple Data Layer and Consumption layer

Business **benefits**

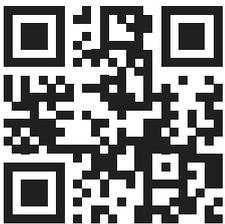

Unique data treatment across multiple data touchpoints by efficiently sourcing and aggregating data based on different variables and translating the denominations to the Data Marketplace for the creation and publishing of datasets

HCL Technologies (HCL) empowers global enterprises with technology for the next decade today. HCL's Mode 1-2-3 strategy, through its deep-domain industry expertise, customer-centricity and entrepreneurial culture of ideapreneurship™ enables businesses to transform into next-gen enterprises.

HCL offers its services and products through three lines of business - IT and Business Services (ITBS), Engineering and R&D Services (ERS), and Products & Platforms (P&P). ITBS enables global enterprises to transform their businesses through offerings in areas of Applications, Infrastructure, Digital Process Operations, and next generation digital transformation solutions. ERS offers engineering services and solutions in all aspects of product development and platform engineering while under P&P. HCL provides modernized software products to global clients for their technology and industry specific requirements. Through its cutting-edge co-innovation labs, global delivery capabilities, and broad global network, HCL delivers holistic services in various industry verticals, categorized under Financial Services, Manufacturing, Technology & Services, Telecom & Media, Retail & CPG, Life Sciences, and Healthcare and Public Services.
