Study Support

The most complete Decentralized Trial Solution Go completely remote with your trials

Tackle various Covid-19 related restrictions and remotely have the patients and sites up and running in 6 days

Medable-HCL decentralized clinical trials solution is modeled on 'direct to patient' interaction technology, leveraging wearables and home based physiological devices, geared up to help pharmaceutical companies reduce study timelines by 50%, lower site burden and speed enrollment by screening and consenting patients remotely, provide multilingual global study support through provisioned and/or BYOD devices, provide patient and site support services as well as develop custom study, site, patient reports on demand.

HCL's Virtualized / Decentralized Clinical Trial Framework (Covid-19 Edition)

Benefits of the solution

HCL's Implementation, Logistics and Patient Support Services allow rapid solution deployment at scale

Medable Platform Operationalized in merely 5 days in a Covid19 impacted country

30+
Global Decentralized Trials

Canada	Japan	United Kingdom
Czechia	Mexico	United States
Denmark	Netherlands	Uruguay
	New Zealand	

Working with Pharma, Biotech and Academic groups to deploy consumer grade applications to sites and patients

Designed for ease of use by patients and sites - low friction in the already complex tool set of a clinical trial

Offering choices on how to engage in the clinical trial ecosystem, support site and patient training and global helpdesk availability

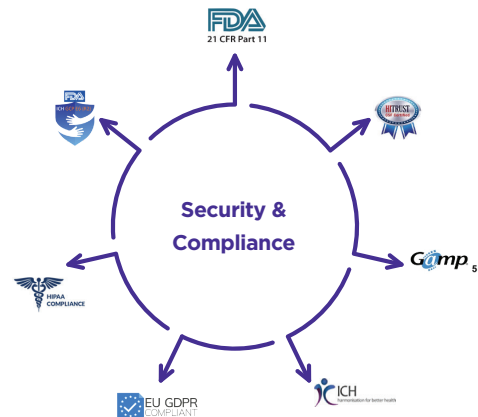

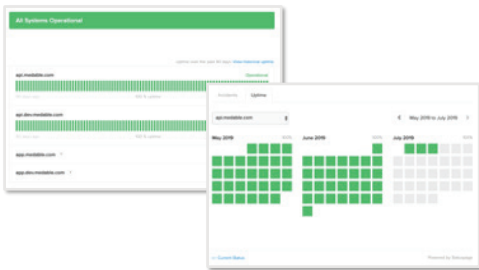

Experience across disease states & all 4 phases of clinical trials

The health platform purpose built for life-sciences technology and compliance

- >99.99% uptime
- OM RPO (Recovery Point Objective)
- Two-factor authentication out of the box

Transparent operational status of platform
