

AI-Enabled Cognitive Virtual Assistant

INTRODUCTION

Enterprises have grown at an exponential scale with multiple business units operating within them. It is these business units that an end user belongs to. An abundance of resources are deployed by enterprises to transform end-user experience (employee and customer), while improving productivity and fostering innovation.

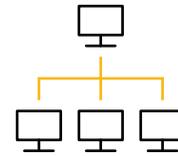

In an effort to further bolster end-user experience and uphold innovation, enterprises offer multiple channels of communication like social media, websites, call support, forums, etc. However the perpetual challenge is to ensure consistent, personalized, and immediate digital experience across all channels.

Focusing on these enterprise business problems, HCL designed its cognitive virtual assistant - **DRYICE Lucy** (Lucy). It mimics human interactions, learns, and adapts to user needs through smart conversations by leveraging enterprise-grade Natural Language Processing (NLP) and Machine Learning (ML). Users can leverage Lucy to procure relevant information spread across a multitude of enterprise systems. Lucy helps organizations move up the maturity curve and enhance user experience for both employees and customers. By deploying advanced NLP, Lucy reduces human error and increases productivity. It comes with out-of-box use case for various scenarios and can be easily extended to cover the “Cognitive Chatbot” needs of modern enterprises.

CHALLENGES ADDRESSED

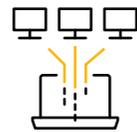

Limited availability of support resources causes high wait time

Multiple systems and applications to get the simplest routine work done, drains time and efficiency

Language inconsistency in a global business scenario leaves users dissatisfied

Routing through a complicated and information-heavy system, to fetch required knowledge wastes time and effort

Absence or high cost of 24X7 help/support system

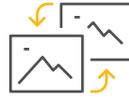

Inconsistent responses to same or similar end user queries based on support executives' understanding

KEY FEATURES

Enterprise Grade Security

Data region flexibility with end point-based security and third-party integrations. The current version of Lucy is Security Assertion Markup Language (SAML) and Single Sign-On (SSO) enabled

Flexible Billing

Custom fit billing model with numerous billing templates and usage categories

Context Switching

Multi-level context switching that allows users to get back to incomplete or digressed conversations

Third party Integrations

Out of The Box (OTB) third party integrations with IT Service Management (ITSM)/ Enterprise Resource Planning (ERP)/ Robotic Process Automation (RPA) and Customer Relationship Management (CRM) providers for quick and robust deployment

On Demand Scalability

Scalable platform for enterprise business needs

Multiple OTB Channels

Various OTB channels available to easily configure

Dynamic Customer Provisioning

Software-As -A-Service (SAAS) availability of Lucy for a provider to create multiple Lucy instances for different customers

Configuration Management

High configurability with low maintenance through rich Graphic User Interface (GUI) role-based consoles

KEY MODULES

Configuration Module

Administrators can configure Lucy for various aspects. It has various sub-modules such as Standard Operating Procedure (SOP) Management, UI Management etc, to name a few.

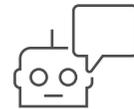

Cognitive Module

Lucy has the ability to understand and interpret the context of conversations happening in natural language. The product is NLP engine agnostic and can work with all industry leading Natural Language Processing engines.

Channel Integrator

Lucy can be integrated with any voice / text - based channel of communication like voice assistants, social media channels (FB Messenger, Skype, MS Teams), and email to receive intuitive human - like responses.

NLP Engine

Natural Language Processing engine empowers Lucy to comprehend all conversations happening in natural language.

Rule Engine

The Rule Engine enables Lucy to define business rules and enables integration based on context of conversations as identified by the NLP engine.

BENEFITS

**Fast Time to Value -
Trained on 600+ use
cases; a subset of which is
available OTB**

**Response
consistency**

Available 24x7

**Improves through
experience**

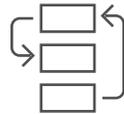

**Infinite
productivity**

**Reduces wait
time**

**Enterprise
integrations**

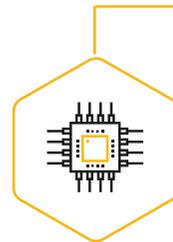

**Platform
agnostic**

ABOUT DRYiCE

DRYiCE is a division of HCL Technologies focused on building industry-leading software products for transforming and simplifying IT and business operations by leveraging AI and cloud.

Our vision focuses on:

Enabling a Service-Oriented Enterprise

AI-led Service Assurance

Driving Enterprise-wide Digital Agility

Business Process Observability
