

# Proofpoint email **security**

## Summary

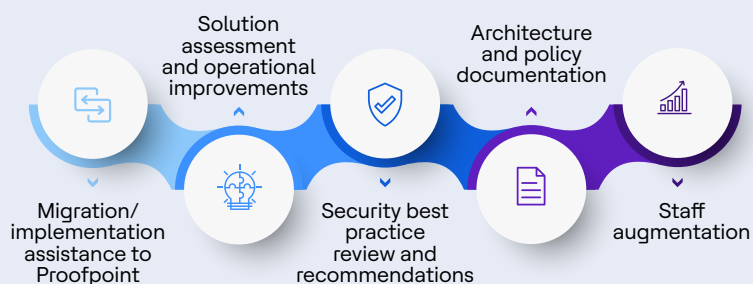

It's estimated that 94% of data breaches start with a targeted email to specific users. The Proofpoint email protection platform safeguards the most important asset to your business- the people, by locking down the biggest threat and delivery vector for data loss, compromises, breaches, and malware: email. You can manage the Proofpoint Protection platform through the Proofpoint Essentials control panel, an all-in-one console allowing administrators to work on administrative, deployment, compliance, and day-to-day activities in a single location.

HCLTech's Fortius cybersecurity consulting can assist clients in their email security journey. Whether it is a new implementation, solving specific security challenges, or performing a health check and get-well plan for existing services, the Fortius team has the experience necessary to make clients successful. Fortius has wide-ranging experience with many of the enterprise endpoint and network security solutions on the market today. As we have in-depth experience with all the big vendors, HCLTech understands how to successfully displace existing solutions and replace them Proofpoint. This also limits downtime and ensures that client security posture is not degraded during the process.

## Who should leverage this service?

1. Clients interested in securing the most common threat vector for their business
2. Customers looking for migration services from other email security solutions
3. Clients who are concerned about their current security posture and would like to review the existing protection technologies
4. Clients who would like to bring product experts into their operational teams through a resident consultant
5. Clients who need help operationalizing their security goal

## Available services
