

# Securing Identities with Privileged Access Management (PAM)

Mitigate credential theft, ensure compliance  
and streamline privileged access everywhere

# Overview

In today's hyperconnected digital world, privileged access is one of the most exploited attack vectors. From ransomware operators to insider threats, adversaries target privileged accounts to gain access to sensitive systems and data. Poor management of these credentials doesn't just open the door to breaches—it heightens regulatory risks, drives up operational costs and erodes customer and stakeholder trust.

To address these challenges, **HCLTech and BeyondTrust** jointly deliver a robust **Privileged Access Management as a Service (PAMaaS)** solution. This offering helps enterprises secure and streamline privileged identities across their IT estate—including on-prem infrastructure, multi-cloud environments and DevOps pipelines.

At the heart of this offering is BeyondTrust's market-leading platform, recognized by Gartner® and Forrester® as a global PAM Leader for its solution depth and breadth, innovation, and enterprise-ready capabilities. Augmented by HCLTech's mature IAM services, accelerators, and global delivery expertise, this solution goes beyond technology—it's a managed service that integrates intelligent automation, Zero Trust enforcement and continuous compliance into the enterprise security fabric.

## Business challenges without PAM

### Increased cyber risk

Without PAM, organizations are highly vulnerable to cyberattacks that exploit compromised privileged credentials. Gartner research has repeatedly linked major breaches to privilege abuse.

### Compliance failures

Industries such as healthcare, finance and energy demand strict access controls to meet standards like GDPR, HIPAA, SOX and PCI DSS. Without PAM, tracking and auditing privileged access becomes complex, often leading to non-compliance and penalties.

### Financial losses

Data breaches and compliance violations frequently result in lawsuits, regulatory fines and remediation costs. High-profile breaches tied to poor PAM practices have cost enterprises millions in damages.

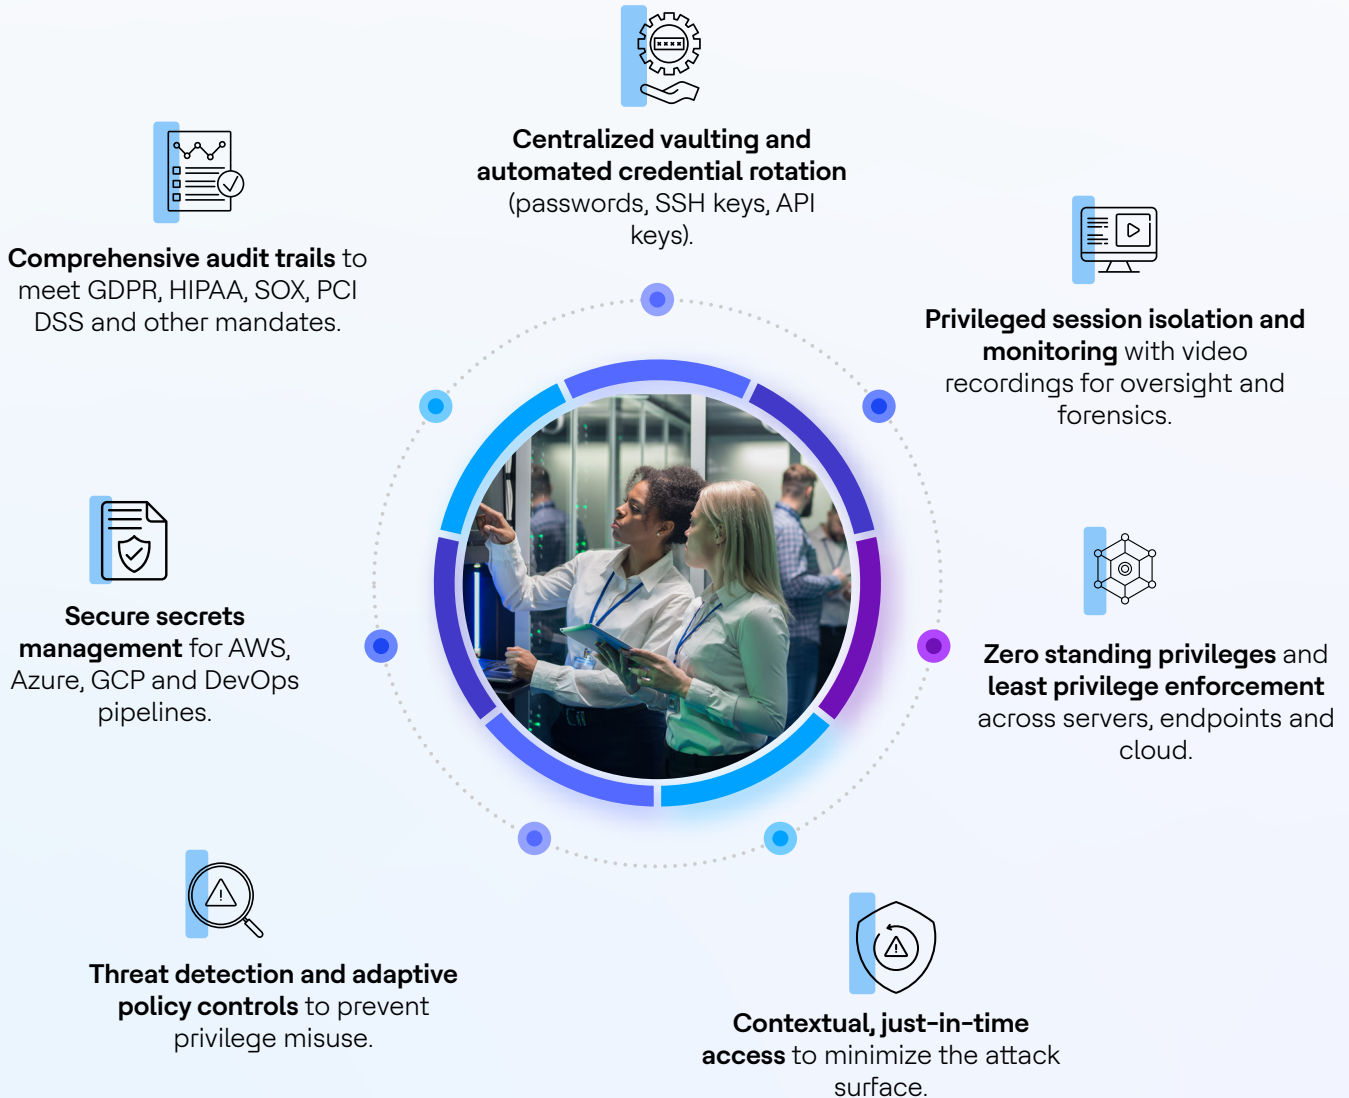

### Operational inefficiencies

Manual management of privileged accounts is time-consuming and error-prone, creating delays in provisioning, misconfigurations and productivity bottlenecks.

# Our solution

HCLTech and BeyondTrust deliver a comprehensive, enterprise-grade PAM solution that mitigates credential theft, ensures compliance and drives operational agility. Key capabilities include:

## HCLTech provides a 360° PAM service model:

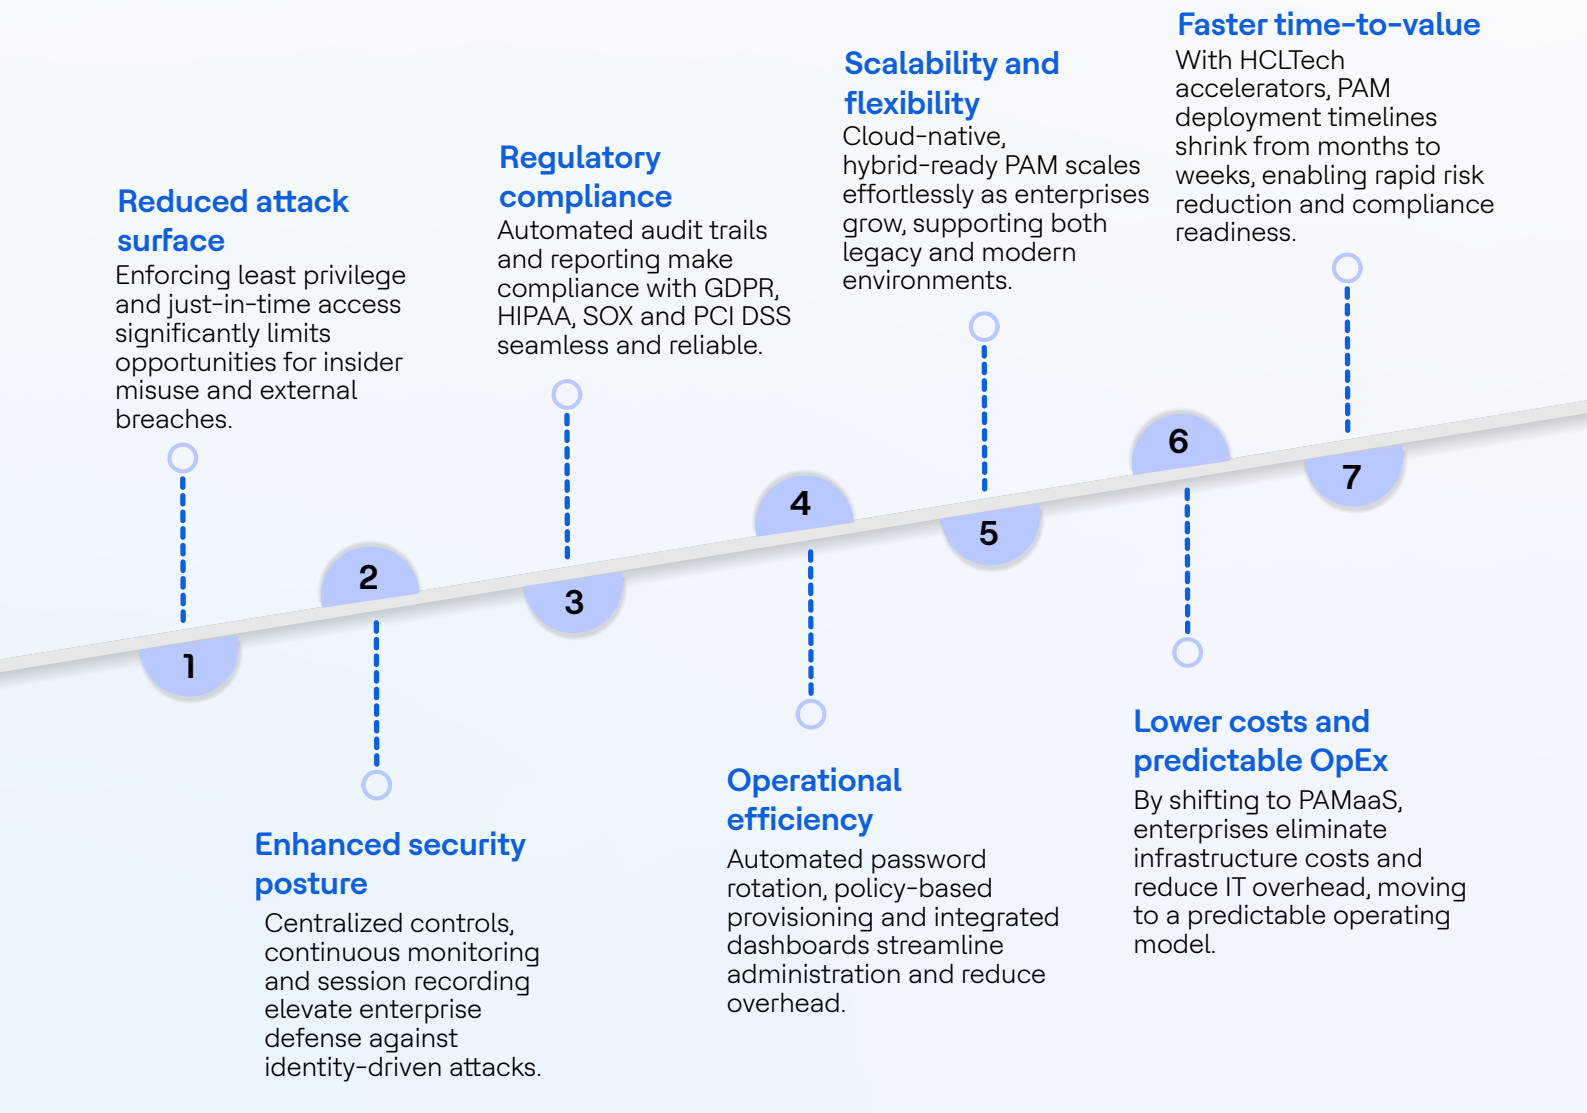

**Advisory and Consulting** – Assess current PAM maturity, design a roadmap, and define security architecture.

**Implementation and Integration** – Deploy & integrate modern PAM protections such as automated credential management, multi-factor authentication, session recording, and real-time threat detection.

**Managed Services** – Deliver 24x7 monitoring, maintenance, reporting and continuous optimization through HCLTech's MiDaaS framework.

# Value delivered

Organizations adopting HCLTech and BeyondTrust PAM-as-a-Service realize tangible business outcomes:

## Why HCLTech?

### Proven experience

10+ years in BeyondTrust projects, with 70+ trained experts and 200K+ systems onboarded.

### Accelerated deployment

Proprietary accelerators like iAssessment, iAutomate, idXalytics and iAccelerate reduce onboarding time by up to 30%

### Global scale

1,500+ IAM specialists and 8,000+ cybersecurity professionals worldwide.

### Flexible models

Engagement options include advisory-led, fixed, or fully managed services across global, nearshore and offshore delivery centers.

### Industry recognition

HCLTech consistently recognized by Gartner, Forrester and ISG as a leader in IAM and cybersecurity services.
