

Accelerate SAP operations with Red Hat Ansible Automation Platform

Enterprises depend on their SAP® landscape for vital business operations. Manually managing this environment in a digital, cloud-based world can be time-consuming and error-susceptible. It may lead to bad performance, prospective downtime, and increased security risk.

IT automation can assist enterprises modernize their SAP management tasks to enhance speed, consistency, and reliability. By automating their environment, organizations can free up time and resources necessary for innovation and create greater value. HCL helps enterprises automate deployment of SAP HANA on public clouds, using Red Hat Ansible Automation Platform, that streamlines operations across SAP and IT environments.

Organizations that use Red Hat Ansible Automation Platform experience:

68% more productive IT infrastructure management teams

41% more efficient application environment management teams

41% more productive network management teams

Key Features

- Facilitates automated takeover of SAP HANA System Replication to address higher availability or disaster recovery scenarios
- Simplifies configuration of SAP HANA landscapes and Red Hat infrastructure with Red Hat Ansible Automation Platform
- Eliminates downtime for maintenance events such as hardware upgrades or software updates
- Supports high availability and disaster recovery for scale-up and scale-out SAP HANA deployments with fully supported Red Hat technologies

► Speed Infrastructure Operations

Automating operations with Red Hat Ansible Automation Platform streamlines both SAP and non-SAP IT management tasks.

44% faster change management

41% faster patching

40% faster provisioning

Benefits

► Accelerate Application Development

Red Hat Ansible Automation Platform provide the tools needed to adopt modern development approaches, accelerating time to market for new applications and features

5% more new features

135% more applications deployed per year so as to maintain the consistency

► Increase Reliability and Availability

Red Hat Ansible Automation Platform can help increase the reliability and availability of both your SAP and non-SAP services.

53% reduction in unplanned downtime

8% increase in faster incident resolutions

► Improve Security and Compliance

Red Hat Ansible Automation Platform can help improve security and compliance across your entire organization.

39% increase in IT security updates

20% increase in network and application security management

Why Red Hat Ansible Automation

Smart Enterprises are built on foundations that define the organization and its capacity for innovation, with a rich portfolio of flexible solutions. Here's why Red Hat Enterprise Ansible automation platform should be your choice for automating your SAP HANA environment:

- Increased IT operational productivity across a variety of infrastructure teams due to the standardization and automation of many configuration tasks and IT operations processes
- Faster deployment of new compute, networking, and storage infrastructure resources
- More efficient and secure application lifecycle management
- Increased scale and speed of application development and deployment using fully automated CI/CD tool chains to accelerate time to market.
- Improved application performance and availability due to reductions in unplanned downtime

HCL has been a global strategic partner to SAP for over 20 years. HCL is a services and license resell partner, co-innovating with SAP in the areas of SAP Leonardo, Blockchain, and S4/HANA. HCL's strategic alliance extends from being a Value Assurance partner to being a Solution Extension (SOLEX) partner.

HCL's global SAP Practice has been delivering award-winning services to our enterprise customers, combining industry experience and a strong track record of innovation to deliver transformational outcomes across the entire SAP portfolio.
