

HCL

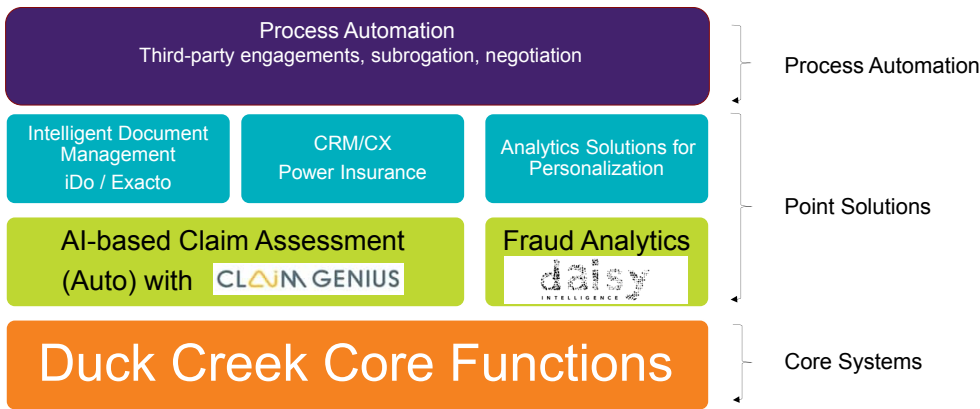

Unique **partnership** inspired by innovation

HCL's Insurance Intelligent Automation framework covers the various toolsets in three different categories as depicted below:

The intent behind the insurance intelligent automation framework is to look at the entire process comprehensive-ly to effect optimal automation that goes beyond tactical benefits. For a digital claims experience, the underlying core system needs to be supported by solutions that can cover the entire ecosystem as well as enable insight-driven decisions. HCL brings together Insurtech partners along with HCL's own IPs and capabilities to provide a comprehensive solution.

The illustrated "digital claims experience" above contains the following solution components:

- AI-based auto claim assessment with ClaimGenius
- Outlier assessment for fraud using Daisy Intelligence
- HCL iDo/Exacto-powered intelligent document solutions
- HCL PowerObjects Dynamics CRM/Power Apps-based Insurance solution
- Predictive analytics solutions for BI and claim reserves
- Tool-agnostic RPA offerings for process automation

The different solution blocks indicated above can either be applied individually or as part of an end-to-end process transformation to provide clear and measurable ROI
