

Digital Key for Car (DKC)

Next generation solution to enable smart devices as a digital key

The advent of connected cars has ushered in a new era of autonomy that brings both exciting opportunities and unique challenges in terms of security, convenience and user experience.

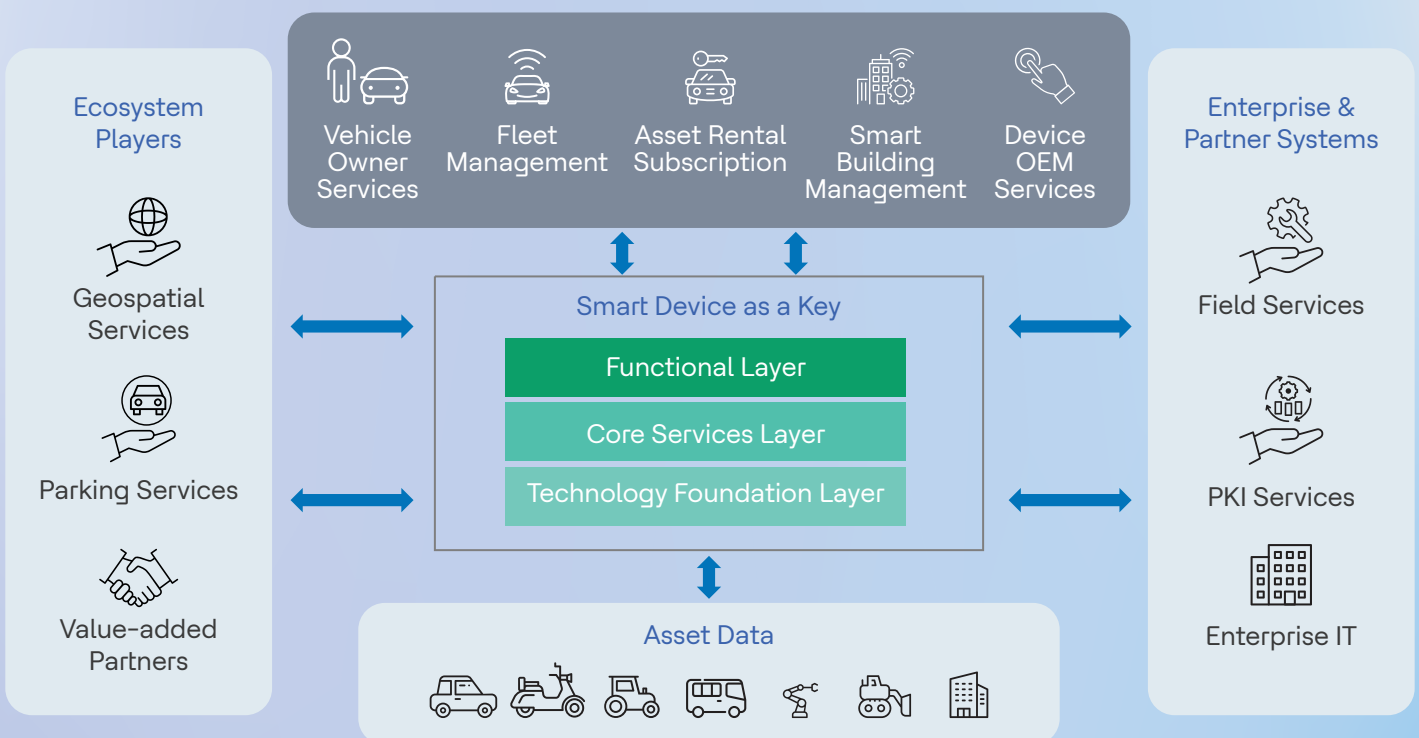

Managing multiple physical keys has become an impediment for vehicle owners, fleet managers and car rental services with increased costs, complexities and vulnerabilities. To improve the safety and convenience of their operations, automobile companies require an industry-standard digital key solution.

Key to the future of connected mobility

HCLTech's Digital Key for Car (DKC) is cutting edge solution that enables a smart device to function as a digital key. Leveraging advanced technologies such as NFC (Near-Field Communication), BLE (Bluetooth Low Energy) and UWB (Ultra-wide Band) this solution offers features like time-based/user-based access, welcome controls, hyper-personalization and much more to deliver a secure and highly personalized experience.

DKC is based on Car Connectivity Consortium (CCC) Digital Key specification and covers a rich set of use cases, from automotive OEMs and fleet operators to mobility rental and subscription service providers, logistic services and more.

Service Framework

Key features

Time-based/user-based access (Remote Access Vehicle Management)

Welcome controls, approach and departure experience

Hyper-personalization with selective access (ignition, boot, etc.)

Digital glovebox and document sharing

Smart key security features to enhance user safety and security

Third-party system integration like enterprise IT, field services, etc.

Benefits

Employs robust security technologies including CCC Digital key security, NFC, BLE and UWB, to ensure user safety

Possible functionalities above and beyond lock/unlock door, start/ stop engine and window movements

Reduced operational complications and improved flexibility to integrate and customize business modules

Customizable safety features that can be programmed based on predictive scenarios

Easy management of keys

Perform safety actions remotely
