HCLTech's industrialization services for SAP BTP

Overcome the challenges of SAP BTP governance at scale

SAP BTP's services are designed for easy consumption and configuration — helping you meet change with agility. Yet managing the platform can be challenging for large enterprises, as **SAP BTP does not include out-of-the-box features for a mature DevOps landscape.**

Instead, clients need to implement governance, development and operations processes according to their own guidelines using SAP BTP's configurable elements and APIs. This can take substantial time and effort.

Our industrialized services for SAP BTP are designed to give you a head start — and enable you to offer SAP BTP as a service within your IT landscape.

Manage SAP BTP with our predefined processes and tools

HCLTech's industrialization framework for SAP BTP will help you define and establish strategies to manage your SAP BTP platform. Its key deliverables include:

1

Governance
framework

2

Service delivery
framework

3

Observability
strategy

4

Platform enablement
strategy

Collectively, these process definitions, best practices, guidelines and tools provide the strategic frameworks needed for you to effectively manage your SAP BTP platform at scale and enable the following capabilities for a given service:

Optimized costs

Processes focused on reducing subscription and service delivery cost

High availability

Guidelines for resilient architecture and establishing cloud engineering teams

Reduced time to market

Best practices to improve speed and developer experience

Reliable delivery

Processes for service fulfillment, governance and establishing development standards

Performance management

Processes for service continuity and risk management

Scalability

Processes and tools to ensure consistent, efficient and robust service implementations

Optimize SAP BTP costs and performance with industrialization

Industrialization offers businesses a dependable service that provides optimum performance, faster time to market and can sustain demand spikes at short notice with the least human intervention.

If you are implementing SAP BTP as a strategic platform, enabling industrialization brings the following efficiencies:

1 Enables highly efficient app delivery cycles:

SAP BTP services are primarily used for application development – and industrialization ensures a standardized, automated development process with appropriate controls for highly efficient delivery.

2 Supports scalability, observability, self-healing and disability:

Most applications on SAP BTP are built with a cloud-native, serverless mindset. HCLTech's industrialization framework provides the processes businesses and IT expect to build, deploy and scale applications efficiently.

3 Provides stringent governance to enable cloud flexibility:
SAP BTP, like other Platform as a Service (PaaS) solutions, offers flexibility in terms of choices for account model setup, hyperscalers, service provisioning and pricing. With such flexibility, platform governance becomes crucial.

4 Ensures faster delivery, visibility and platform resilience:
An industrialized framework comprised of well-defined processes and tools can successfully orchestrate the different IT teams required for SAP BTP management.

5 Supports compliance: Typically, BTP services are a part of the overall application landscape. Hence the implementation and the management of these services needs to adhere to the standards and guidelines of the organization.

Key benefits of HCLTech's framework for the industrialization of SAP BTP services

A well-governed platform

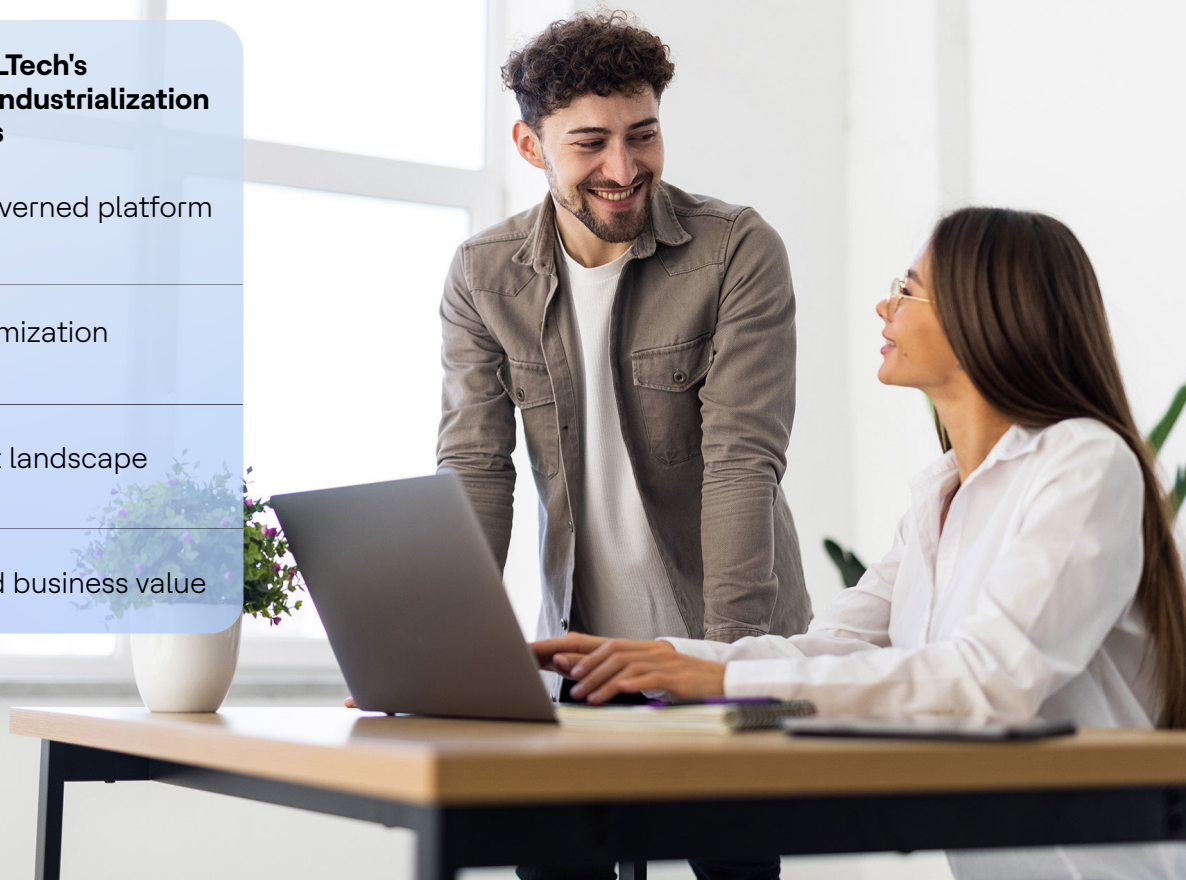

Cost optimization

A resilient landscape

Enhanced business value

About HCLTech's SAP Practice

To get the best return on your digital investments, you need a partner that doesn't just do SAP right, but does it better. Our SAP practice works seamlessly with HCLTech's digital consulting, engineering services, IoT WoRKS™ and cloud infrastructure practices to design, implement and support tomorrow's integrated, intelligent solutions today. An SAP Global Strategic Services Partner, our team of 12,500+ consultants leverages insights, advanced accelerators and industry-acclaimed frameworks to deliver award-winning services from local offices across Europe, Africa, Asia and the Americas.
