

SCALE DIGITAL

ALMSmart™

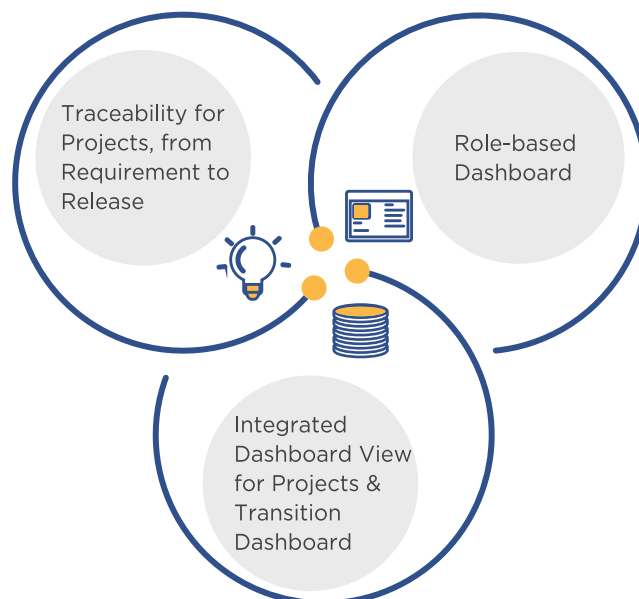

INTRODUCTION

ALMSmart™ is a framework that integrates project management, collaboration and engineering tools to automate project lifecycle activities enabling seamless experience throughout the lifecycle of a project

It provides customizable tools for enhanced planning, execution, monitoring, control and reporting of activities in all the stages of application delivery lifecycle by providing each stakeholder with its own role-based access. All the day-to-day work items, issues, risks and reviews can be captured, tracked and accessed within the system. More importantly these can be linked to each other and to the business requirements and task initiatives based on relevance and context-based clusters of information.

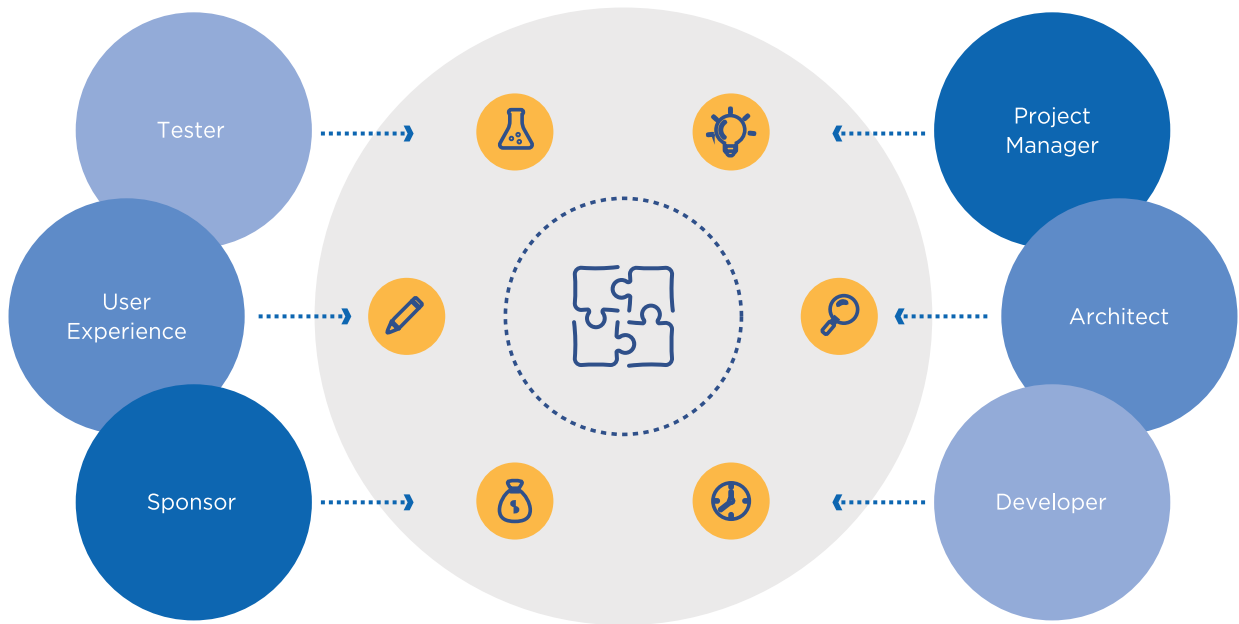

ALMSmart™ provides:

WHY ALMSmart

It tackles issues of team members working in silos

- There is no real-time visibility of the exact status across the team, at any point of time
- Tedious task of manually collecting/collating the status from different teams every day
- Can be error-prone because the status may be reflecting for a different point of time
- Manually preparing status reports in different formats for different stakeholders
- Person-dependent
- Manually having to track the traceability across different SDLC phases
- No Collaboration amongst different teams

SOLUTION HIGHLIGHTS

ALMSmart™ allows usage of any tool - commercial or open source available in industry/market including implementation of the best practices as per HCL's Organization Management System / Industry. The tools available with a client or a project can be leveraged. As per the client/project requirements, appropriate tools can be added / integrated incrementally.

Integrated Dashboard view for all Project related information

Centralize information from various tools to ensure real-time Project Status and Reporting. All the project data is located at one place which the team members can view depending on their access rights

Tooling Solution by enabling Automation

It can implement Continuous Integration & Continuous Delivery by using tools like Jenkins / Bamboo to ensure quality and consistency through automation by reducing manual work in repeatable jobs

Collaborative platform to manage the Projects effectively and efficiently

It can handle various sort of project monitoring techniques on a single platform. Using ALMSmart™ you can do Project Schedule Management, Risk Management, Defect Management, Issue Tracking, Test Management etc.

Key Business Drivers

Project Lifecycle Automation

Cost Reduction

Improved & Consistent Quality

Business Benefits

- Centralizes all details/statistics from various tools, ensures real-time Project Status and Reporting
 - Accelerates development through simplified integrations
 - Traceability feature guides project team on Project status, historical account of requirements, decisions and changes brought within project
 - Quality through more-effective management of requirements, design and quality processes
 - Transparency among team members on work assignment and status
 - Supports teams to connect, collaborate and deliver on time throughout the Project Lifecycle
 - Integrated, Real-time visibility and Predictability through dashboards, brings in confidence in senior management and customer, thus helps improve customer satisfaction
-

Case Study

Customer Overview:

A leading postal service company based out of United Kingdom with revenues in excess of £9.3 billion and more than 160,000 employees

Key Benefits Achieved

- Reduction in project management effort
 - Reduction in manual build execution effort by 100%
 - Transparency across the team and other stakeholders
-

Engagement Overview:

We implemented ALMSmart to automate Event Process System (EPS) operations. EPS mainly contains Pre-Advice, Scanning of Parcels & processing them through different client locations and scans delivered at Doorstep, Enquiry Office & Delivery Offices. It also automated Tracking and Tracing of the Parcels
