

HAPI FOR COMMERCE CLOUD: PRODUCT INTRODUCTION

HAPI is an accelerator that helps Product Managers release new products or modify existing Products in Salesforce Commerce Cloud (B2B - Cloud Craze). Setting up a product involves data entry in at least 13 objects in Cloud Craze. Product Managers could take about 3-4hrs to setup one product in Cloud Craze. HAPI leverages simple/flat CSV files to setup Products in Cloud Craze in 4 simple steps that reduces the time by 50%. The steps are as follows:

PREPARE & VERIFY WORKSHEET

HAPI comes with a pre-defined template to setup Product data. The template allows Product Managers to define the Product structure into one single worksheet. Holding information for product master, product features, pricing and product specs. This template also takes inputs on pricing relevant to each product and in multiple currencies.

UPLOAD INFORMATION

HAPI provides a Staging area to easily load the worksheet into Salesforce using few clicks.

TRANSFORM & SETUP

On click of a button HAPI transforms the worksheet data and loads it into 13 different Cloud Craze objects to setup or Modify the product.

VERIFY IN STOREFRONT

As a final check, the Product Manager logs into the eCommerce storefront to check for accuracy.
